

Retail Store Sales Analysis Dashboard

1. Problem Statement

Retail stores generate sales data daily across products, customers, and regions. Management finds it difficult to identify top-performing products, sales trends, and profitable regions using raw Excel data.

A Power BI dashboard is required to provide insights into sales performance and support business decisions.

2. Objective

Develop an interactive dashboard that enables users to:

- Monitor total sales and profit
 - Analyze sales by category and region
 - Identify top-selling products
 - Track monthly sales trends
 - Compare regional performance
-

3. Software Required

- Microsoft Power BI Desktop
 - Microsoft Excel
 - Power BI Service (Optional)
-

4. Dataset Required

Sales Table

Field Name

Order ID

Order Date

Field Name

Product Name

Category

Quantity

Unit Price

Sales Amount

Profit

Region

Customer Name

Product Table

Field Name

Product ID

Product Name

Category

5. DAX Measures

- Total Sales
 - Total Profit
 - Total Orders
 - Average Sales
 - Profit Margin %
-

6. Dashboard Pages

Executive Summary

- Total Sales
- Total Profit

- Total Orders

Sales Analysis

- Sales by Category
- Sales by Region
- Monthly Sales Trend

Product Analysis

- Top 10 Products
 - Bottom 10 Products
-

7. Expected Outcome

Management can identify:

- Best-performing products
- High-revenue regions
- Monthly sales growth
